

Assignment 1: R Markdown practice

Zeynep Cakez

2024-09-02

1 How the Course Works

The weekly interactive tutorials must be completed by the start of each week. Then weekly assignment will be due at the end of each week.

2 Course Goals

By the end the course, student will be able to:

- Use [Github](#) for creating a reproducible research document.
 - My GitHub username is: *zeynep-ckz*.
- Obtain, clean, transform, and, visualize dataset using R programming language.
- Interpret and predict dataset trends using statistical interface models.
- Critically interpret and predict statistical claims reported in mass media.

3 Including Code

3.1 Running R code n code chunk

```
x <- 2 + 4  
x + 9
```

```
## [1] 15
```

The output of the first line of code is not printed out because it is assigned to a variable instead.

The second line of output is printed out instead, but this means that the calculated value has not been saved for future use.

3.2 Displaying Graphics

```
plot(x = iris$Sepal.Length, y = iris$Sepal.Width)
```
